Garrett Infinium LS Underwater/Land Metal Detector

Model : -

Manufacturer : Garrett

Garrett Infinium LS Underwater / Land Metal Detector. This powerful, Pulse Induction metal detector will help you find treasures that have been both lost and missed by the generations before you either on land or 200ft. under the sea! The Infinium LS we're featuring comes with a powerful 10" x 14" PROformance Power DD searchcoil and underwater headphones.

A PROformance DD 10" x 14" submersible searchcoil at the end of the Infinium LS is state-of-the-art "Rhino Tough" and interchangeable with three other sizes. This searchcoil is versatile and deep-seeking, making it effective for any type of detecting. Because the Infinium LS was meant to be submersible, you can take this coil and the entire detector into 200 feet of water without any adverse affects – this means the possibilities of finding treasure are almost limitless!

Possibly the most impressive aspect of the Infinium LS may not be its capacity to go 200ft. under water, but its 96 frequencies. No other manufacturer even comes close to creating a detector with this many frequencies! This is possible thanks to the API (Advanced Pulse Induction) technology that simultaneously provides the greatest number of multiple frequencies of any detector on the market – meaning you'll find more with this detector than with any other! Find thin gold nuggets and delicate jewelry other detectors miss, while ignoring hot rocks, salt, terra cotta and overall changing ground conditions.

In addition to the plethora of frequencies provided by the Infinium LS, you'll also be impressed with the detection depth and stability in mineralized environments. This means that no matter where you are – Arizona gold fiends, the volcanic rockslides of the Pacific Northwest or the black-sand beaches on the coast of Italy – the Infinium LS will provide the best results for the active treasure hunter because it can literally go anywhere. If you're hunting in similar soil, the Infinium's "Automatic Ground Tracking allows you to "lock" the ground track for the best performance. If you notice changes in the soil, choose "slow" or "fast" automatic tracking.

The "Discrimination" dial will allow you to treasure hunt "all metals" or narrow it down to a specific type. And the audible target identification assists you by employing different sounds for different metals. The best part is that the discrimination specifications are available for nearly 100% of the Infinium's detection depth, not just your surface targets!

With adjustable and automatic ground tracking, nine advanced discrimination levels, Tone ID for enhanced target information, and a fully submersible and all-environment

Garrett Infinium LS Underwater/Land Metal Detector

design, the Infinium LS is by far the most technologically advanced multiple frequency detector on the market.

Looking for gold in Australia or Arizona? Searching volcanic rockslides of the Pacific Northwest or the black-sand beaches along Italy's coast? Then take the Infinium LS. And the waterproof design of the Garrett Infinium LS ("L" for land, "S" for sea) makes it the first metal detector highly recommended for both land detecting and underwater diving.

Product Features:

- World's most powerful pulse induction machine
- 96 frequencies
- Designed for operation in extremely mineralized environments
 - It's depth and discrimination capabilities exceed all competition
 - Can be used virtually anywhere in the world, even at depths of 200 feet
- Ultra-low battery drain with standard AA batteries
- All Metal Deepseeking Mode
- Audio Threshold, Adjustable
- Audio Tone ID
- Discrimination, Full Range (PI)
- Frequency, Adjustable
- Ground Balance, Automatic Ground Tracking
- Hip Mount Control Box
- Microprocessor Controlled
- Salt Elimination Mode (PI)
- Surface Mount PC Board Technology

Specifications:

- Length: 28" to 52" - Adjustable
- Weight: 5.5 lbs. (2.5 kgs.)
- Circuit type: Advanced Pulse Induction technology, automatic cancellation of salt/ground mineralization
- Multiple Frequency Technology - 96 Frequencies
- Detection Frequency: 730 pulses per second, adjustable
- Submersion depth: Up to 200 feet (65 meters)
- Buoyancy: Near neutral
- Batteries: 8 AA
- Battery life: Alkaline (included): 10-15 hours Rechargeable (included) 7-10 hours
- Battery re-charger for AC and Automobile (included)
- Control housing weight: 31 oz.
- Headphones: 16 oz.

Search Modes:

- Non-Motion All Metal with Adjustable PI discrimination

Garrett Infinium LS Underwater/Land Metal Detector

Settings:

- Ground Tracking Speed
- Discrimination
- Threshold
- Volume Control on Land Headphones
- Detection Frequenc

Price : \$1,062.50
